Computing Science Course Outlines

CMPT 307 - D100 Data Structures and Algorithms

Instructor(s): Ramesh Krishnamurti

SFU Burnaby

Calendar Objective/Description:
Analysis and design of data structures for lists, sets, trees, dictionaries, and priority queues. A selection of topics chosen from sorting, memory management, graphs and graph algorithms.

Instructor's Objectives:
The objective of this course is to introduce concepts and problem-solving techniques that are used in the design and analysis of efficient algorithms. This is done by studying various algorithms and data structures.

Prerequisites:
CMPT 225, MACM 201, MATH 151 (or MATH 150), and MATH 232 or 240.

Topics:
- Basic algorithm analysis
- Simple data structures ((lists, arrays, stacks, queues, heaps)
- Graph traversal algorithms (Breadth First Search, Depth First Search)
- Greedy algorithms (Dijkstra's algorithm, Prim's algorithm, Kruskal's algorithm)
- Divide and conquer algorithms
- Recurrence relations
- Dynamic programming
- Applications
- Network flow (if time permits)

Grading:
The course has a final examination (worth 40% of the total grade). There will be four homework assignments which won't be collected and graded. Instead, there will be four 50-min quizzes (based on these assignments) in class (worth 15% each).

Required Books:
Algorithm Design, J. Kleinberg, É. Tardos, Addison Wesley, 2006, 9780321295354

Academic Honesty Statement::
Academic honesty plays a key role in our efforts to maintain a high standard of academic excellence and integrity. Students are advised that ALL acts of intellectual dishonesty will be handled in accordance with the SFU Academic Honesty and Student Conduct Policies ( http://www.sfu.ca/policies/gazette/student.html ).
