CMPT 353 - D100 Computational Data Science

Instructor(s): Gregory Baker

Calendar Objective/Description:
Basic concepts and programming tools for handling and processing data. Includes data acquisition, cleaning data sources, application of machine learning techniques and data analysis techniques, large-scale computation on a computing cluster.

Instructor's Objectives:
This course will be an introduction to the tools and techniques in data science. We will explore common challenges and solutions used in analysis of data.

Prerequisites:
CMPT 225 and (STAT 101, STAT 270, BUCEC 232, ENSC 280, or MSE 210).

Topics:
- Basics of data science: concepts, goals, motivation, expectations.
- Introduction to selected data processing tools: Python with numpy and pandas.
- Working with data. Cleaning data; extract, transform, load tasks; applying concepts from statistics.
- Machine learning basics with existing implementations (such as scikit-learn).
- Data analysis strategies: selecting techniques from statistics and machine learning.
- Big data tools.
- Data visualization and summarizing results.

Grading:
Details to be announced in first week of class. Will include weekly exercises, a project, quizzes, and exams.
Students must attain an overall passing grade on the weighted average of exams in the course in order to obtain a clear pass (C- or better).

Academic Honesty Statement::
Academic honesty plays a key role in our efforts to maintain a high standard of academic excellence and integrity. Students are advised that ALL acts of intellectual dishonesty will be handled in accordance with the SFU Academic Honesty and Student Conduct Policies (http://www.sfu.ca/policies/gazette/student.html).
