CMPT 980 - G100 Special Topics in Computing Science

Instructor(s): Khaled Diab

Calendar Objective/Description:
This course aims to give students experience in emerging important areas of computing science.

Instructor's Objectives:
Learning the concepts of computer system and network security. Understanding the practice of network security monitoring. Gaining hands-on experience of analyzing network traces, and detecting possible threats and attacks. Defending the network infrastructure by deploying and implementing intrusion detection systems, firewalls, and virtual private networks. Reproducing various system and network attacks.

Prerequisites:
Instructor discretion.

Topics:
- Threats and attacks on operating systems
- Network security monitoring and analysis
- Network defences
- Network threats and attacks

Grading:
To be discussed in the first week.
