CMPT 120 - D100 Intro.Cmpt.Sci/Programming I

Instructor(s): Diana Cukierman

Calendar Objective/Description:
Intro.Cmpt.Sci/Programming I

Instructor's Objectives:
An elementary introduction to computing science and computer programming, suitable for students with little or no programming background. Students will learn fundamental concepts and terminology of computing science, acquire elementary skills for programming in a high-level language and be exposed to diverse fields within, and applications of computing science.

For the Summer 2021 semester, all course components (lectures, assignments, and exams) will be online. Students must have access to a computer with internet access, allowing the use of a conferencing system such as Zoom. We will meet every class synchronously (real-time) unless otherwise specified. Lessons will be recorded and posted after class; office hours will be available for group or individual consultation. Materials may be additionally provided as a pre-recorded lessons or readings. Visual proctoring may be required via Zoom or other platforms.

All the course information and communication will be centralized in the Canvas course website, including materials, assignments, and a discussion forum. Students should organize their Canvas settings to be notified when announcements are posted.

CMPT 120 PLACEMENT TEST – do you have enough computing knowledge to pass our placement test? Have you taken Computing Science courses in High School or elsewhere? Have you worked in a business or volunteered as a computer programmer? Have you written programs of 200-300 lines of code or more?

IF YES, you may NOT have to take CMPT 120 and could enroll directly into the next required courses – CMPT 125 and 127. Challenge yourself and take our placement test. https://courses.cs.sfu.ca/forms/cmpt-cmpt-120-placement-test/

IF NO – please go ahead and enroll in CMPT 120.

Prerequisites:
see go.sfu.ca

Topics:
- Algorithms and computational thinking
- Procedural programming in Python
- Data types and control structures
- Application areas within computing science
- Fundamental algorithms, including searching, sorting, basics of recursion
- Computability and complexity, introduction
- Basics of binary encoding

Grading:
There will be assignments and multiple quizzes/exams. A more detailed marking scheme will be provided in the first class of the semester.

Students must attain an overall passing grade on the weighted average of exams in the course in order to obtain a clear pass (C- or better).

**Required Books:**

Think Python - How to Think Like a Computer Scientist: Interactive Edition
https://runestone.academy/runestone/books/published/thinkcspy/index.html

**Reference Books:**

Starting out with Programming Logic and Design, Tony Gaddis, Pearson, 2016, 9780133985078, Available on reserves at the SFU library

**Academic Honesty Statement:**

Academic honesty plays a key role in our efforts to maintain a high standard of academic excellence and integrity. Students are advised that ALL acts of intellectual dishonesty will be handled in accordance with the SFU Academic Honesty and Student Conduct Policies (http://www.sfu.ca/policies/gazette/student.html).
